ABOUT THE SUMMIT

The Securitisation Summit is an annual coming together of stakeholders in structured finance industry in India, earmarking its seventh year.

The claim to achievement of the Summit is that not only do we end up discussing matters, we pick points for advocacy and we take the same up with the relevant regulators , policy-makers or other concerned persons, so as to resolve/achieve what is desired. The resolution of the distribution tax issue, withholding taxes on payment to SPVs as well as permission to FIIs for investing in securitisation transactions were picked up during previous summits, and we achieved effective results.

As a result, today, the securitisation market in India has drastically changed from what it was. With tax inefficiencies removed, and foreign investors allowed to invest in securitisation transactions, the market today is poised for a big take off, and in particular, to emerge beyond priority sector lending.

The securitisation transactions witnessed an all time high in the fiscal year 2017 due to the changes in underlying market dynamics like clarity on distribution tax, increased participation by the treasuries of private sector banks and non-banking finance companies (NBFCs), and the re-entry of mutual funds.

To plan the roadmap ahead for the better future prospects for the securitisation industry, we invite you all to come and be a part of this wholly changed scenario of structured finance in the country. You may hope to meet the who's-who of the stakeholders in the Indian structured finance.
